

AIM:To write a C program to implement CPU performance measures.

ALGORITHM:

Step 1: start

Step 2:Declare the necessary variables: cr (clock rate), p (number of processors), p1 (a copy of the number of processors), i (loop variable), and cpu (array to store CPU times).

Step 3: Initialize the cpu array elements to 0.

Step 4: Prompt the user to enter the number of processors (p).

Step 5: Store the value of p in p1.

Step 6: Start a loop from 0 to p-1:

a.

Prompt the user to enter the cycles per instruction (cpi) for the current processor.

b. Prompt the user to enter the clock rate (cr) in GHz for the current processor.

c.

Calculate the CPU time (ct) using the formula: $ct = 1000 * cpi / cr$.

d.

Display the CPU time for the current processor.

e.

Store the CPU time in the cpu array at index i.

Step 7: Set max as the first element of the cpu array.

Step 8: Start a loop from 0 to p1-1:

a.

If the CPU time at index i is less than or equal to max, update max to the current CPU time.

Step 9: Display the processor with the lowest execution time (max).

Step 10: Exit the program.

PROGRAM:

```
#include <stdio.h>
Int main()
{
    float cr;
    int p,p1,i;
    float cpu[5];
    float cpi,ct,max;
    int n=1000;
    for(i=0;i<=4;i++)
    {
        cpu[i]=0;
    }
    printf("\n Enter the number of processors:");
    scanf("%d",&p);
    p1=p;
    for(i=0;i<p;i++)
    {
        printf("\n Enter the Cycles per Instrcution of processor:");
        scanf("%f",&cpi);
        printf("\n Enter the clockrate in GHz:");
        scanf("%f",&cr);
        ct=1000*cpi/cr;
        printf("The CPU time is: %f",ct);
```

```

    cpu[i]=ct;
}
max=cpu[0];
for(i=0;i<p1;i++)
{
if(cpu[i]<=max)
max=cpu[i];
}
printf("\n The processor has lowest Execution time is: %f ", max);
return 0;
}

```

Project Classes Debug cpu performancme.cpp

```

1  #include <stdio.h>
2  int main()
3  {
4  float cr;
5  int p,p1,i;
6  float cpu[5];
7  float cpi,ct,max;
8  int n=1000;
9  for(i=0;i<=4;i++)
10 {
11     cpu[i]=0;
12 }
13 printf("\n Enter the number of processors:");
14 scanf("%d",&p);
15 p1=p;
16 for(i=0;i<p;i++)
17 {
18     printf("\n Enter the Cycles per Instrcuton of processor:");
19     scanf("%f",&cpi);
20     printf("\n Enter the clockrate in GHz:");
21     scanf("%f",&cr);
22     ct=1000*cpi/cr;
23     printf("The CPU time is: %f",ct);
24     cpu[i]=ct;
25 }
26 max=cpu[0];
27 for(i=0;i<p1;i++)
28 {
29     if(cpu[i]<=max)
30     max=cpu[i];
31 }
32 printf("\n The processor has lowest Execution time is: %f ", max);
33 }

```

OUTPUT:

A screenshot of a DevC++ terminal window. The title bar shows the file path 'C:\Users\manid\OneDrive\Do' and standard window controls. The terminal has a black background with white text. It displays the following sequence of prompts and user inputs: 'Enter the number of processors:2', 'Enter the Cycles per Instrcution of processor:2', 'Enter the clockrate in GHz:3', 'The CPU time is: 666.666687', 'Enter the Cycles per Instrcution of processor:1', 'Enter the clockrate in GHz:2.2', 'The CPU time is: 454.545441', and 'The processor has lowest Execution time is: 454.545441'. The text ends with a line of dashes.

```
C:\Users\manid\OneDrive\Do  ×  +  ∨

Enter the number of processors:2

Enter the Cycles per Instrcution of processor:2

Enter the clockrate in GHz:3
The CPU time is: 666.666687
Enter the Cycles per Instrcution of processor:1

Enter the clockrate in GHz:2.2
The CPU time is: 454.545441
The processor has lowest Execution time is: 454.545441
-----
```

RESULT: Thus the program was executed successfully using DevC++.
